DESCRIPTION

The fascinating foliage of <i>Chamaecyparis obtusa</i> ‘Chirimen’ displays multiple textures and colors. That explains the name, ‘Chirimen’, which is a dyed crepe fabric traditionally made from silk and used for making kimonos. Each narrow, upright tree becomes a cluster of thick, upright shoots that resemble bottle-brushes, with both juvenile and adult foliage in shades of blue and green. The effect is striking and unusual for a Hinoki cultivar. Use this textural accent where the crinkly, congested foliage will stand out. Requires excellent drainage.
Chamaecyparis obtusa 'Contorta' is an exceptional dwarf Hinoki cypress with a naturally dense, broad pyramidal habit and uniquely twisted branching that gives every plant its own character. Rich green, shell-like foliage is accented by occasional thread-like shoots, creating outstanding texture and year-round interest in the garden.
texture sport found in the early 2000s, on a specimen of C. obtusa 'Tsatsumi Gold' by Peet Schrauwen of Boomkwekerij Schrauwen-Moerings Nursery, Sprundel, The Netherlands. Peet named his selection in honor of his granddaughter.
Compacta' as it is also known, is a stunning specimen with arching branches. This false cypress is ideal for providing evergreen texture and interest. Easy to grow as it is low maintenance and slow growing. It naturally forms an open and pyramidal habit and can be grown as a standalone specimen or part of a screening hedge. A native of Japan, Compact Fernspray is suitable for growing in zones 4 to 8, and is tolerant of drought once established.
mound that contributes beautifully to small-scale plantings, including rock gardens, troughs and container gardens. Reliable year-round performance and very slow growth assure that ‘Nana’ will retain its claim to fame.
sculptural forms that look like crooked, up-stretched arms, each one adorned with compact, medium green fans of foliage. This selection responds well to selective pruning to accentuate its artistic shape. Selected by Joe Reis, Long Island, New York.
Robust, narrowly upright, naturally multi-stemmed, tree-form of Hinoki cypress with dense branching that grows with a slight arch, and attractive deep, emerald-green foliage. This cultivar originated as a seedling selected in the late 1970s by Wells Nursery LLC, Mt. Vernon, Washington. Many consider this to be one of the nicer of the larger-growing Hinoki cypress cultivars.
A versatile plant that offers year-round color and texture! Cedar Rapids® false cypress will give you a lush evergreen and privacy with a unique texture. This is a fast-growing feathery selection of false cypress with fresh-looking, lime-green foliage. It naturally grows as a dense pyramid and provides year-round coverage. Great as a handsome specimen or for screening or privacy hedging, Cedar Rapids® <i>Chamaecyparis pisifera</i> brings a touch of charm and winter interest to any landscape. Plus, it’s deer-resistant, allowing you to enjoy its constant color worry-free.
side, and the dense, compact form works well wherever a more rounded version of <i>C.p.</i> ‘Boulevard’ is needed. Use it to line the drive or define a garden wall. Partial shade produces a richer blue.
in winter. An excellent choice for an accent or specimen plant.
Boulevard Cypress. At 12 years of age, the plants should reach 9' tall x 6' wide. The juvenile foliage is quite soft, and the blue color adds even more charm. We think this is destined for greatness.
soft texture to tight garden spaces. <i>Chamaecyparis pisifera</i> ‘Cumulus’ stays small without pruning and its foliage is most dense when grown in full sun. Particularly useful for container, trough or rock gardens and other small sites. A fun choice for miniature topiary.
miniature and container gardens, each plant will spread slowly into a low, irregular mound that suggests moss. Where exposed to more sun, the foliage turns brighter yellow. Easy, resilient and hardy.
Addams family kinky! Grows in all different directions. Nice, rare, new.
is a symmetrical, pyramidal form that typically matures to 30-40' tall and to 20-30' wide. Lime-green to blue-green needles are evergreen. In comparison to the species, 'Yoshino' grows faster and its needles acquire fewer bronze tones in winter.

DESCRIPTION

Dense, low-growing, spreading evergreen shrub cultivar. This cultivar is one of the low-growing junipers admired for its attractive, glaucous, bright blue-green or silvery-blue needle-like foliage.
This carpet-forming evergreen groundcover Juniper has golden yellow color that is at its brightest in full sun. Will grow only 10 to 15 inches tall and 3 to 8 feet wide. An excellent groundcover or for cascading over walls. Deer and drought tolerant. Use as edging, border, mass planting, and in beds. Year-round interest.
of constantly wet soils. It has the best drought resistance of any conifer native to the eastern U.S. Tolerate: Deer, Drought, Erosion, Dry Soil, Shallow-Rocky Soil, Black Walnut, Urban Conditions
the perfect evergreen for small vertical spaces in the garden.
for mixed borders or containers. A very adaptable, tough, durable plant.
extremely narrow, columnar habit, it still has a fast growth rate, so you can get the privacy you need quickly. Thin Man® thuja holds its winter color very well, providing lush green interest in the garden year-round.
Interesting architecture, and this selection native Eastern arborvitae (<i>Thuja occidentalis</i>) takes skinny to the max with its sword-like silhouette. Use it to make an exclamation point in garden designs, or fit it into a very narrow bed. Certain to be iconic plant in well-designed landscapes everywhere, from the Shire to Shreveport.
have the effects of ornamental grasses without winter die-back. Light shearing will encourage a formal, compact form and provide a proliferation of bright and colorful foliage. Plant <i>Thuja (Platyclusus) orientalis</i> 'Franky Boy' full sun for best color.
Lime green foliage in summer, which turns to purple bronze in fall, then amber to deep orange in winter. Flat fans of soft, colorful foliage are held vertically and are very dense. The result is a circle of soft foliage around an upright growing plant. Originating in Australia, it enjoys moist, well-drained soil.
With intense yellow foliage that stays bright all season and through the winter, this plant is truly forever gold. Being both heat and drought tolerant, it is highly resistant to burn. Fast growing but compact, it serves excellently as a low maintenance hedge or screen. Definitely an eye-catcher in the garden.
A remarkable abelia from Minier Nursery in France with tricolor foliage in shades of green, cream and pink, tinged with yellow in spring. Fragrant white flowers appear continuously throughout summer, and its compact habit suits it ideally to mixed borders, cottage-style gardens, or containers on a terrace or balcony.
production and the landscape. Its green, yellow, and orange foliage is also less likely to revert than other variegated cultivars of abelia. Dark red stems add a surprising amount of color and contrast, and white summer flowers bring fragrance and pollinators.
tolerant of drought, heat, and salt and adapts to nearly any soil. In spring, an abundance of white flowers cover this shrub before changing to bead-like fruit that transition from yellow to orange to brilliant red. Red foliage accompanies the fruit for unforgettable fall interest. At just one-third the size of 'Brilliantissima' aronia, Berry Scape fits into many roles in gardens and landscapes. This remarkable shrub was developed by Dr. Mark Brand at the University of Connecticut.
Orange is happy. Orange is cheerful. And there's no orange-r barberry than Sunjoy Neo®. Tom Ranney of NCSU brings us this eye-catching, jaw-dropping new selection that is bright and colorful all season, positively electric in spring. Dense, semi-dwarf habit makes it an ideal selection for landscape or garden beds.
The plant makes an outstanding four season specimen flanking a doorway or growing in a decorative pot but can also be used in mass on a dry hillside or cascading over a wall. It can also be used much like a traditional boxwood but will give a softer, less formal appearance which fits in well with modern landscapes.
developed in America, they are resistant to the specific strains of boxwood blight that threaten our landscapes. Lush evergreen foliage and handsome rounded habit, without the worries of pests and diseases. In Saunders Brothers' extensive trials in Virginia and North Carolina, this selection has shown superior resistance to boxwood blight, as well as to boxwood leaf miner. It has a faster-than-average growth rate so benefits from regular pruning, both in production and in the landscape.

DESCRIPTION

NewGen Independence boxwood has a useful globe-like habit, dark green foliage, and slightly more elongated leaves than other <i>Buxus</i> species. Nearly as tall as it is wide, its strong branching structure helps it withstand snow loads. Medium growth rate. Each NewGen variety has been extensively tested for resistance to boxwood blight and only those that show true resilience meet the standard for introduction. Because NewGen boxwood are developed in America, they are resistant to the specific strains of boxwood blight that threaten our landscapes.
callicarpa is sure to be a hit in the garden and at retail. While other callicarpa selections tend to get frosted before the berries color up, thanks to Bubble Up [®] 's early fruiting, it has fruited with abundance here in Michigan. Its bright purple berries are the perfect unexpected addition to fall cut flower arrangements. Incredible deer resistance.
appearing amid glossy, tropical-looking foliage for months every summer, many times lasting into fall. The abundant 'Aphrodite' sweetshrub blooms really pop in cut flower arrangements. Its flowers are fragrant, though the scent is highly subjective - ask around your staff and see what everyone smells! A beautiful, carefree plant for large spaces developed by Dr. Tom Ranney at NCSU. 'Aphrodite' is fast to produce.
Pruning is usually not necessary, but may be done in early spring to shape. If plants become unmanageable, however, they may be cut back near to the ground in early spring to revitalize. Attracts hummingbirds and butterflies.
Pruning is usually not necessary, but may be done in early spring to shape. If plants become unmanageable, however, they may be cut back near to the ground in early spring to revitalize. Attracts hummingbirds and butterflies.
making it much more friendly to residential landscapes. Large, fragrant, orb-shaped blooms in summer become ornamental red fruit, which persists through fall. Glossy foliage and widely adaptable. Winner of the Pennsylvania Horticultural Society Gold Medal in 2024.
sp.). <i>Chilopsis</i> is well-known for its tolerance to poor soils and the dry heat of the American Southwest, its <i>Catalpa</i> percentage imbues it with wonderful performance in Asheville, North Carolina, with no signs of mildew. Look for its remarkable blooms to appear in late spring/early summer and sporadically appear throughout the summer, all the better to enjoy its beautiful fragrance. El Niño desert orchid is a new and very special flowering shrub that is as easy to grow as it is beautiful. We have the talent and innovation of NCSU's Dr. Ranney to thank for this
flowers appear in mid-summer.
NEW! A fountain of flowers and fragrance, Ripple Effect™ summersweet was a favorite in our trials, selected for its multiple, successively blooming, floral racemes. The fragrant white flowers bloom abundantly in summer, drawing in bees, butterflies, and other pollinators. The flowers are backdropped by healthy dark green foliage, which gets a lovely blend of fall coloring in autumn. This native <i>Clethra alnifolia</i> has a dense, compact habit, tucking nicely into foundation plantings, mixed borders, or in pollinator or wildlife gardens.
The flower spikes of <i>Clethra alnifolia</i> 'Ruby Spice' are not the washed-out shades of many pink selections, but a deep reddish pink that stands out from a distance against excellent dark green foliage. These colorful blooms retain the fragrance that makes <i>Clethra</i> a most desirable summer-flowering shrub. Good cut flower, native, fragrant, and attracts pollinators.
tiny white flowers in spring that support pollinators. A compact red-twigg dogwood, Arctic Fire® Red is just 3-5' tall and wide, rather than the 8-10' size of conventional varieties, making it much better suited for residential landscapes. Bring the outdoors in and use Arctic Fire® Red dogwood as a cut stem for holiday arrangements or for season-long color indoors. Native to North America, this <i>Cornus sericea</i> (formerly known as <i>Cornus stolonifera</i>) is drought-tolerant and deer and rabbit-resistant.
power, and fall color. It produces an abundance of bottle brush-like white flowers, has a well-branched mounded habit, and small bluish-green leaves that turn an attractive blend of yellow, orange, and red in autumn.
'Goshiki' means "five colors" in Japanese, and you'll count at least that many on the flashy foliage of this versatile evergreen, especially in spring when the new growth is emerging. Small white flowers in autumn make an impact primarily through their intense fragrance. Introduced by Barry Yinger.

DESCRIPTION

Big, multi-colored flowers create major impact in the garden. Each pure white, satellite dish-like bloom is painted, tie-dye style, with red and pink from the inside to the edges. Abundant flower set, coupled with the bright green leaves, creates an incredible effect in the landscape.
Very easily shifted from pink to blue. Let's Dance® Rhythmic Blue® reblooming hydrangea is a full, richly colored mophead, with each flower made up of neatly geometric florets. The reliable blooms are held up on sturdy stems, and a tidy habit and good wilt-resistance add to its appeal. Developed in Michigan for improved cold tolerance and reblooming ability.
Fire Light® panicle hydrangea is the new standard for measuring all hardy hydrangeas. Upright panicles are packed with florets, which transform from pure white to rich pomegranate-pink. Its thick, sturdy stems hold up the big, beautiful flowers so they are prominently displayed in the garden. The large blooms are also an excellent addition to cut flower arrangements, both fresh and dried. Fire Light® <i>Hydrangea paniculata</i> is incredibly low maintenance and easy to grow, and its useful habit makes it a great choice for a specimen, hedge, or border.
and mature to a pure white. As the blooms age, they turn lime green and, for a bit of surprise, a fresh sprig of white flowers emerges from the tip of the panicle. A tight, compact habit with stems strong enough to hold its blooms. This NCSU hydrangea has all the talent needed to be a first-class landscape performer.
landscape possibilities. Of course, it offers the same showy white flowers and outstanding fall color that make oakleaf hydrangeas so beloved, but what really sets this apart is its container presentation. A boon to growers and retailers, Gatsby Glow Ball oakleaf hydrangea looks tidy, rounded, and appealing, even in a container.
White blooms turn showy deep pink. Simply remarkable, Gatsby Pink® oakleaf hydranga boasts big showy blooms which transform from pure white to a deep true pink. Color develops early and persists through the season. The dark green foliage turns mahogany-red in autumn. Another great plant developed by Powell Gardens of Kingsville, MO. Native.
Developed by the U.S. National Arboretum, 'Munchkin' has a compact form and dense habit that makes it ideal for use in residential landscapes. Abundant white inflorescences appear in early summer and gradually turn medium pink, The dark green foliage turns mahoghany-red in fall.
gardens. Discovered by Richard Scott and Russell Blue of Alabama Nursery.
turns mahogany-red in fall. The compact habit and large upright inflorescences make it well-suited to residential gardens. Developed by the US National Arboretum from a cross of 'Snow Queen' and 'Pee Wee'.
turns mahogany-red in fall. The compact habit and large upright inflorescences make it well-suited to residential gardens. Developed by the US National Arboretum from a cross of 'Snow Queen' and 'Pee Wee'.
Let’s Dance Hot Stepper bigleaf hydrangea is a hardy, reliable rebloomer with wide flower heads that nearly cover the foliage. Mature blooms darken beautifully, contrasting with fresh flowers and lime-green buds. If you look closely, you’ll see white-veins on the petals that add elegant detail. Perfect for filling the border or using in a cut flower garden.
the series, has massive dinner plate sized blooms. Sterile florets are doubled and waterlily-like, taking on outstanding pink or blue coloration depending on soil conditions. Like all <i>H. serrata</i> , it has outstanding bud hardiness. Prepare to be impressed!
numerous, and the leaves are willow-like. Native to North America.

DESCRIPTION

better container for the grower and retailer, and a better plant for the landscape. Its handsome evergreen foliage, disease resistance, and compact habit make it an excellent native alternative to boxwood. Use Gem Box Prime™ inkberry holly in all the ways a boxwood would be used in the landscape, like hedging, foundation planting, edging, or in containers. Note to growers: proper spacing in production ensures a full, lush plant.

and disease resistant, this plant offers huge potential for the landscape market and home owners alike. Stays green and well-branched right to the ground. Native to North America and highly adaptable.

Male! Castle Rouge blue holly (Ilex × meserveae) is the biggest thing to happen to blue holly since Kathleen Meserve made the first crosses of Ilex aquifolium and Ilex rugosa back in the 1950s. All season long, its new growth emerges a glossy red-burgundy color for spectacular effect, and once winter comes, the whole plant turns a deep, dark burgundy. It's a male and will serve to pollinate the rest of the Castle series as well as other blue hollies, but unlike conventional male hollies, this one is handsome enough to give pride of place in the landscape.

Narrow form makes them great for hedges, foundation plantings, or even as a dramatic specimen. The lustrous green foliage provides season long interest. Castle Spire® is a female variety with a strongly narrow, pyramidal habit.

berries are not edible for humans, but birds will happily scoop them up when they soften in winter. Berry Heavy® winterberry holly attracts an abundance of pollinators, but deer aren't interested in it. Use in mass plantings, wildlife gardens, or native gardens for a truly eye-catching winter display. The vibrant fruit looks great in floral and holiday arrangements. Berry Heavy® *Ilex verticillata* is a female selection and requires a male pollinator to produce berries; use Mr. Poppins® winterberry holly.

who want bright winter color and fruit for cutting but don't have room for a conventional I. verticillata. It is heavier fruiting than 'Red Sprite'. For berries on this female selection, a male pollinator is required; use Mr. Poppins® winterberry holly. Fruit is not edible.

shoot like fireworks from the glossy foliage in summer. Just a fraction of the size of conventional Itea, its mounded, compact stature makes it an improvement over older varieties such as the 'Henry's Garnet'.

thick, dark green leaves that contrast nicely with the lightly fragrant, pure white blooms. These flowers are enjoyed by people and pollinators alike. This native shrub's compact habit and shade tolerance make it the perfect little shrub to use around the home and in wildlife and woodland gardens. Thanks to Fizzy Mizzy® sweetspire's naturally tidy rounded shape, it needs very little pruning, making it a lovely low-maintenance addition to any garden.

fragrance. So how could Scentlandia® sweetspire improve on the classic? Better hardiness, for one, so that even gardeners in the colder parts of its hardiness zone can enjoy the fragrance, year after year. It also boasts brighter, more consistent fall color, along with a compact, refined habit.

white, bronze, and yellow hues. Racemes of fragrant white flowers dangle elegantly from the slender, arching stems, enticing pollinators. Its versatile low habit and outstanding deer resistance, as well as shade tolerance, make this a problem-solving plant with aplomb.

has very dark burgundy-purple foliage and has a compact mounding habit. In spring, the dark foliage is packed with vibrant pink streamer-like flowers. Jazz Hands® Velvet has exhibited superior color retention in extensive trialing in Texas and Alabama, as well as healthy growth and fantastic bloom coverage. As with all the loropetalum in the Jazz Hands® series, this shrub has great deer and disease resistance and excellent tolerance for heat and humidity. Another great Jazz Hands® variety from noted Japanese plant breeder Yuji Suzuki.

The size and quantity of flowers are an ode to the classic appeal of azaleas: rich bubble gum to hot pink single blooms drench the plant with color in spring and again in fall. Like its sister Perfecto Mundo Epic Coral azalea, you'll enjoy huge blooms that look fabulous in the container and in the landscape.

Fire up the landscape with the blazing-hot hue of Perfecto Mundo Orange azalea. This selection really heats up the series with a warm color and red-hot performance. Like the rest of the Perfecto Mundo azaleas, you can count on outstanding bloom in spring and in fall, with handsome, dark green foliage and a dense, rounded habit to carry it through the between-times.

everyone else in the vicinity – will love the rich, spicy-floral fragrance of Sweet Reward Pink azalea. It all makes for a wonderful spring show in the garden as well as in the garden center, with a bloom perfectly timed for prime shopping season. Developed by NCSU's Dr. Jim Ballington.

EXCLUSIVE! Bright orange and yellow native azalea specifically bred by Vivian Abney for Dr. Sue Hamilton for UT Gardens.

EXCLUSIVE! Bright orange native azalea specifically bred by Vivian Abney for UT Gardens.

As lovely in the garden as it is in a vase or on the table! Flavorette Pear'd rose creates delicate pink flowers that have a distinctive light pear flavor, and a lush, soft texture that's lovely to eat. The semi-double flowers are borne on a sturdy, healthy plant that's easy to grow.

The bright flowers contrast beautifully with the consistently dark, bluish-black foliage, creating a striking dynamic in the garden or landscape. The vibrant summer flowers transition to deep red fall fruit when planted with Black Beauty, Instant Karma, Black Lace, or Laced Up elderberry. Thanks to its more refined habit and superb flowering, Pink Pony® *Sambucus nigra* has great container presence and undeniable impulse appeal.

pineapple yellow. Dark purple blooms appear in late spring, making this the most eye-poppingly colorful Double Play® spirea yet. This sterile, triploid spirea was developed by Tom Ranney of NCSU.

before transitioning to bright yellow. Growers, retailers, and homeowners will appreciate its neat and compact habit in a container and in the landscape. It's also very durable and easy to care for, making it an ideal choice for eye-catching yet low-maintenance landscaping.

Double Play® Princess *Spiraea japonica* is more vibrant than the previous princess and resists fading to a dull pink. Not only is the bright pink flower color better, but this spirea also boasts an even neater, more compact habit. Like the rest of the Double Play® series of spirea, Double Play® Princess has superior, colorful foliage and is a durable, disease resistant landscape shrub. This adorable compact spirea has excellent container presence, making it a delight for you to grow and shoppers to snag at retail. Double Play® Princess spirea was developed by Mike Farrow.

size and the delicious spicy-sweet fragrance that makes it such a perennial favorite. Fabulous orange-red fall color substantially expands season of interest. This fast-growing selection can be trained into a small tree or grown as a large shrub- either way, it will turn heads.

white. A much stronger grower than conventional *V. carlesii*.

DESCRIPTION

for handsome bunches.

Mamba is a robust variety with high yields of upright, exceptionally uniform plants. The attractive dark green leaves are deeply savoyed and have good flavor. Strong seedling emergence for vigorous, productive plants. Lacinato or "dinosaur" type kale. Vigorous, hybrid Lacinato type.
